ShopSphere Retail Sales Analytics

Part D – Business Insights | Power BI dashboard analysis, January 2024 – December 2025

Introduction. This report answers the ten Part D business questions using the five-page ShopSphere Power BI dashboard (Executive Overview, Product & Category, Store & Regional, Customer Insights, Promotions & Time). The model is a star schema: one fact table (FactSales, 25,569 transactions) linked to five dimensions (DimDate, DimProduct, DimStore, DimCustomer, DimPromotion) and a measures table (Total Sales, Total Profit, Profit Margin % and others). Figures are quoted from the visuals cited as **V1–V20** (key below). A dagger (†) marks a value not printed on a visual but obtained from the same model measures, e.g. a year-on-year change using the Year slicer or a share of total. Amounts are in ₹ (M = million).

Total Sales	Total Profit	Profit Margin %	No. of Transactions	Unique Customers
₹121.96M	**₹34.57M**	**28.35%**	**25,569**	**3,430**

Headline KPIs (V1, Executive Overview).

Part A – Data Model (Power BI tables and relationships)

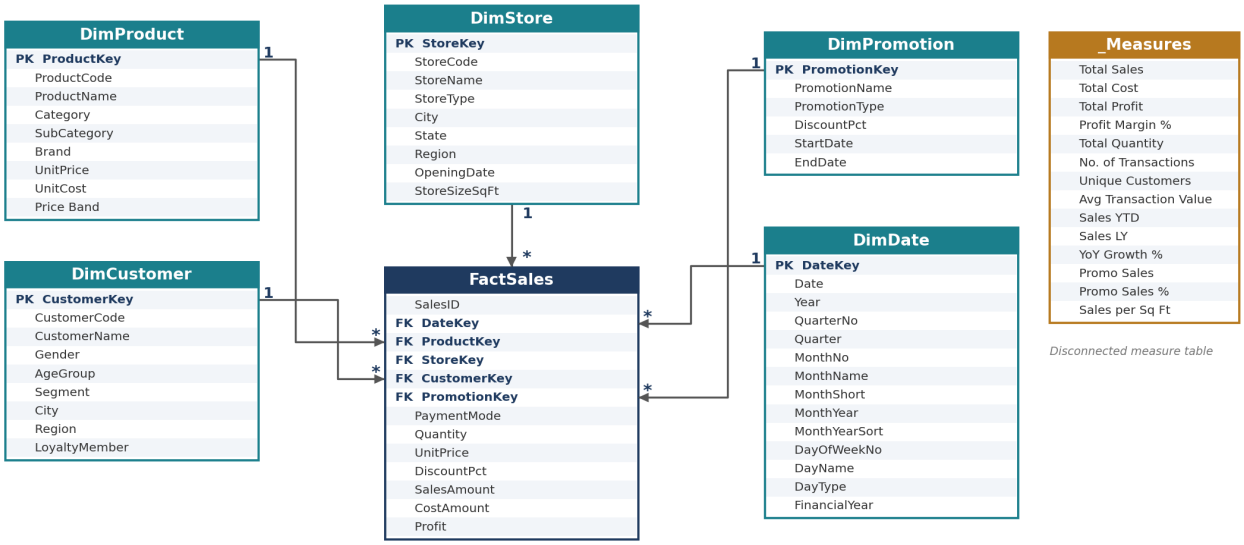

Figure 1. Data model: FactSales (centre) joined to DimProduct, DimCustomer, DimStore, DimPromotion and DimDate by five Many-to-One, single-direction, active relationships on ProductKey, CustomerKey, StoreKey, PromotionKey and DateKey. _Measures holds the 14 DAX measures. Diagram rendered from the .pbix model metadata (table and column names, keys and relationships).

Promotions & Time	**V17** Monthly Sales Trend (by year) · **V18** Sales by Promotion · **V19** Sales by Promotion Type · **V20** Discount Impact on Profit

Q1. How has ShopSphere performed overall, and is the business growing? V1, V4

Insight: V1 reports total sales of ₹121.96M and profit of ₹34.57M (28.35% margin) from 25,569 transactions and 3,430 unique customers. V4 shows 2025 sales of ₹62.86M against ₹59.09M in 2024, growth of 6.4%†. Profit grew faster (+11.5%†, ₹16.35M to ₹18.22M) because margin improved from 27.67%† to 28.99%†. Growth was volume-led: transactions rose 16.6%† (11,807 to 13,762) while average transaction value fell from ₹5,005† to ₹4,568†.

Recommendation: Protect the margin gain and lift basket value through bundles and cross-selling (for example accessories with mobiles and laptops) so that extra traffic does not dilute ticket size.

Q2. When do sales peak and dip during the year? V3, V17

Insight: Sales are strongly seasonal. October is the peak at ₹10.88M (Oct 2024) and ₹11.02M (Oct 2025), i.e. 18.4%† and 17.5%† of each year's sales; October and November together contribute 32.5%† (2024) and 29.2%† (2025). The lowest months are Feb 2024 (₹3.05M) and Jul 2024 (₹3.06M), with Feb 2025 at ₹3.52M and Jul 2025 at ₹3.84M. A secondary spike appears in May (₹4.81M in 2024, ₹5.80M in 2025), coinciding with Summer Clearance (V18). V17 shows 2025 above 2024 in 10 of 12 months†; the exceptions are September and November (₹7.33M vs ₹8.35M, −12.2%†).

Recommendation: Front-load inventory, staffing and marketing for October–November, use February and July for targeted traffic offers, and investigate why November 2025 slipped below 2024.

Q3. Which regions generate the most sales, and which lag? V2, V9, V10

Insight: West and South together deliver 69.0%† of sales (V2). V9, which groups sales by customer region, gives the same ranking: West 37.30%†, South 31.38%†, North 22.95%† and East 8.37%†. East has a quarter of the stores (6 of 24) but only 8.39% of sales, and its sales per sq ft is ₹96† against ₹203† in the West. North is the only region that shrank (−12.8%†), driven by Delhi Central (₹5.08M to ₹2.79M, −45.1%†) while Delhi Mall, Jaipur and Lucknow grew 5.8–8.3%† (Chandigarh fell 25.1%†). East grew 44.1%† but from a small base.

Region (V2)	Stores	Sales	Share	Profit margin†	YoY 2025†
West	6	₹45.59M	37.38%	27.60%	+13.6%
South	6	₹38.60M	31.65%	28.70%	+4.8%
North	6	₹27.54M	22.58%	29.24%	−12.8%
East	6	₹10.24M	8.39%	27.94%	+44.1%

Recommendation: Launch a turnaround review of Delhi Central (range, competition, stock availability), and treat East as a build market with smaller formats and local assortments rather than large-store expansion.

Q4. Which stores perform best and worst on sales and profit? V11, V10, V12

Insight: The top 10 stores in V11 generate ₹77.18M† (63.3%† of sales). Ahmedabad Central leads with ₹9.56M (7.84%†), followed by Mumbai Central (₹9.05M) and Bengaluru Central (₹8.84M); the top three hold 22.5%†. V10 shows the same two stores earning the highest profit (₹2.56M and ₹2.55M), although Ahmedabad Central's 26.77%† margin is below the chain's 28.35%. At the bottom, Kolkata Mall (₹0.78M, 0.64%†), Kolkata Central (₹0.85M) and Bhubaneswar Central (₹1.27M) are all in the East; the five smallest stores add up to just 5.26%† of sales. Both Kolkata stores have the highest margins (35.99%† and 33.60%†), so the problem is footfall, not pricing. V12 lets users filter any store by region.

Recommendation: Codify the Ahmedabad and Mumbai operating model for replication, run traffic-building actions in Kolkata (Kolkata Mall sales per sq ft is only ₹36†), and set a review threshold for sub-scale stores.

Q5. Which categories and subcategories drive revenue and profit? V5, V6

Insight: Electronics drives revenue but Fashion drives profit. Electronics contributes 45.69%† of sales but only 16.12% margin, so it earns 26.0%† of profit; Fashion earns ₹14.30M, 41.4%† of all profit. In the V6 treemap, Mobiles (₹29.69M, 24.3%†) and Laptops (₹22.45M, 18.4%†) alone make up 42.7%† of sales, followed by Footwear and Men's Wear at about ₹9.9M each. Beauty & Personal Care has the best margin (49.11%) and is the fastest-growing category (+80.7%†), while Electronics and Home & Kitchen declined year on year.

Category (V5)	Sales	Share	Profit	Margin	YoY 2025†
Electronics	₹55.72M	45.69%	₹8.99M	16.12%	−4.6%
Fashion	₹32.77M	26.87%	₹14.30M	43.63%	+14.7%
Home & Kitchen	₹15.29M	12.54%	₹5.17M	33.78%	−4.9%
Beauty & Personal Care	₹10.13M	8.31%	₹4.98M	49.11%	+80.7%
Grocery	₹8.04M	6.59%	₹1.15M	14.30%	+8.3%

Recommendation: Defend Electronics volume but improve its unit economics through supplier terms and accessory bundles; shift marketing weight toward Fashion and Beauty, where each rupee of sales yields roughly 2.7–3 times the profit of Electronics.

Q6. Which products are the top sellers, and how concentrated is revenue? V7

Insight: V7 ranks Xiaomi Mobiles Classic first (₹15.22M, 12.48%†), then Apple Laptops Lite (₹11.50M, 9.43%†) and Apple Mobiles Max (₹8.89M, 7.29%†); these three account for 29.2%† of total sales and the top 10 for 56.9%† from 60 products. Six of the ten are mobiles or laptops; the other four are Fashion lines: Allen Solly Men's Wear Classic (₹4.95M), Bata Footwear Plus (₹4.93M), Fabindia Women's Wear Pro (₹3.83M) and Peter England Men's Wear Plus (₹3.58M). The electronics leaders sell on few transactions (169, 117 and 131†), so revenue depends on a small number of high-ticket orders.

Recommendation: Secure supply and pricing terms for the top three items, and build the next tier of Fashion best-sellers to reduce dependence on a handful of Electronics SKUs.

Q7. Which products have high sales but low margins? V8

Insight: V8 plots sales against Profit Margin %. The clearest outlier is Xiaomi Mobiles Classic: ₹15.22M of sales at only 13.90%† margin, followed by Lenovo Laptops Prime (₹5.92M, 14.42%†) and Apple Laptops Pro (₹5.03M, 15.81%†), all well below the 28.35% chain margin. By contrast the Fashion best-sellers earn 44–46%† (Allen Solly 44.33%, Bata 44.57%, Fabindia 46.38%). The Grocery tail has the lowest margins (Nescafe Beverages Prime 10.37%†, Tata Tea Beverages Lite 10.62%†) but on small sales. In total, 21 of 60 products earn under 20%† (11 Grocery, 10 Electronics) and they generate 51.4%† of sales.

Recommendation: Renegotiate cost prices on Xiaomi and Lenovo lines and avoid discounting them; position Grocery as a traffic driver, not a profit source, and steer the basket toward higher-margin Fashion and Beauty items.

Q8. Which customer segments and cities contribute most to sales? V13, V15, V16

Insight: V13 (age groups) shows 25–34 as the top segment at ₹38.06M (31.21%†) and 35–44 at ₹31.76M (26.04%†), together 57.3%†; 55+ is smallest at ₹13.05M (10.70%†). V15 shows Female customers at ₹64.45M (52.84%†) versus Male at ₹57.51M (47.16%†), with similar margins (28.01% vs 28.72%†). V16 shows sales concentrated in metros: Mumbai ₹18.65M (15.29%†), Bengaluru ₹15.25M (12.51%†) and Delhi ₹13.74M (11.26%†), with the top three cities at 39.1%† and the top ten at 79.7%† of sales.

Recommendation: Focus campaigns and CRM on 25–44 year-olds and women's ranges, prioritise metro marketing budgets, and test dedicated offers to grow the 18–24 and 55+ groups.

Q9. How important are loyalty members to the business? V14

Insight: V14 splits the 3,430 purchasing customers into 1,969 loyalty members (57.4%†) and 1,461 non-members (42.6%†). Members generate ₹84.49M, or 69.3%† of sales. Per customer they are worth ₹42.9K† versus ₹25.6K† for non-members (1.7×), making 9.1† purchases against 5.2†. Their average transaction value is slightly lower (₹4,706† vs ₹4,920†), so the loyalty effect comes from frequency, not basket size.

Recommendation: Convert the 1,461 non-members with enrolment incentives at checkout, and introduce tiered rewards (spend thresholds) that encourage members to increase basket value as well as visit frequency.

Q10. How effective are promotions and discounts? V18, V19, V20, V17

Insight: Promotional sales total ₹26.87M, 22.03%† of all sales (V19 shows the Festive, Seasonal and Clearance types against ₹95.09M with no promotion), and they earn an 18.79%† margin versus 31.05%† without a promotion. Within V18, Diwali Dhamaka is the largest promotion (41.2%† of promo sales) and the most profitable (₹2.01M), and it coincides with the October peak in V3/V17. V20 shows that deeper discounts do not buy proportionate profit: Summer Clearance (45% summed discount across both years) earns just ₹0.94M, and its margin fell from 15.03%† to 9.34%† when the discount rose from 20% to 25%, while its sales grew only 10.1%†. The 10–12% Seasonal offers keep margins at 24.9–27.7%.

Promotion (V18/V19)	Discount	Sales	Share of total	Profit	Margin
No Promotion (Type: None)	0%	₹95.09M	77.97%†	₹29.52M†	31.05%†
Diwali Dhamaka (Festive)	15%	₹11.06M	9.07%†	₹2.01M†	18.17%†
Summer Clearance (Clearance)	20% (2024), 25% (2025)	₹7.84M	6.43%†	₹0.94M†	12.04%†
Year-End Bonanza (Seasonal)	12%	₹3.12M	2.56%†	₹0.86M†	27.68%†
Republic Day Sale (Seasonal)	10%	₹2.51M	2.06%†	₹0.63M†	24.92%†
Independence Day Offer (Seasonal)	10%	₹2.34M	1.92%†	₹0.61M†	25.90%†

Recommendation: Cap discounts at about 15%, redesign or drop the 25% Clearance event (exclude low-margin Electronics and Grocery), and repeat the Diwali and Year-End formats; measure incremental lift against a non-promotion baseline before each campaign.

Conclusion

ShopSphere is growing (+6.4%† sales, +11.5%† profit) on a 28.35% margin, but growth is concentrated: October–November, three metro cities (Mumbai, Bengaluru, Delhi), the West and South regions, and a few Electronics items drive most revenue (V3, V2, V16, V7). Profit comes from a different place than revenue: Fashion and Beauty carry margins of 44–49% while Electronics and Grocery sit at 14–16% (V5). Heavy discounting, especially Summer Clearance, erodes margin without a matching sales lift (V20). **Priority actions:** (1) fix Delhi Central and build East with suitable formats; (2) shift mix and marketing toward Fashion and Beauty; (3) renegotiate Electronics costs and cap discounts near 15%; (4) convert non-members into loyalty members and grow basket value.
